

Data Security Posture Management Platform

See, Follow, Protect - Regain Control Over Your Cloud Data Chaos

Automated data security & compliance platform - wherever your sensitive data is, however fast developers create it.

“While the modern cloud has enabled an unprecedented acceleration in development, it has also made companies accrue a dangerous data security debt, now they have Polar Security to help them overcome it”

- Omkhar Arasaratnam

Former Data Protection Engineering Director,
JPMorgan Chase

How It Works?

- ✓ **Discovery**
Continuous discovery of managed, unmanaged and “shadow data”
- ✓ **Custodianship**
Identify data store’s custodian (application, service user)
- ✓ **Classification**
Automated labeling of sensitive data
- ✓ **Data Flows Mapping**
Track potential & actual data movements and access
- ✓ **Posture**
Detect and remediate data vulnerabilities and compliance violations

Agentless

Read-only

Zero-impact to performance

Key Benefits

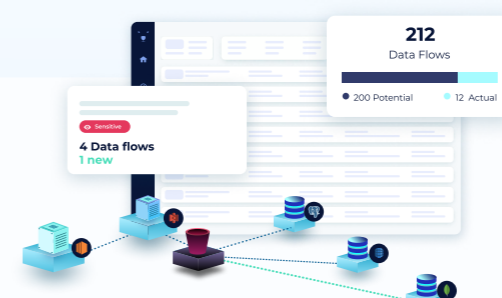

See Your Data Automated Data Inventory

- Discover all known & shadow data stores
- Understand data store’s custodian
- Identify sensitive data

Customer Perspective

“Before using Polar Security’s platform we used to interview our developers to understand where our data is, which isn’t scalable and reliable in any way. Now we have a continuously updated data inventory.”

Follow Your Data Data Movement and Access

- Identify data access and permissions
- Track potential & actual data movements
- Detect anomalous data access and movements

Customer Perspective

“We had no ability to track data movement between applications, accounts, and countries. Polar Security now enables us to uniformly view all data access and movement.”

Protect Your Data Data Posture Management

- Detect data security vulnerabilities
- Detect data compliance violations
- Active remediation

Customer Perspective

“Most security solutions focus on securing the perimeter or general workload. For us - protecting the data itself is what matters. We appreciate Polar’s data-first approach as it starts by protecting the data, then everything else.”

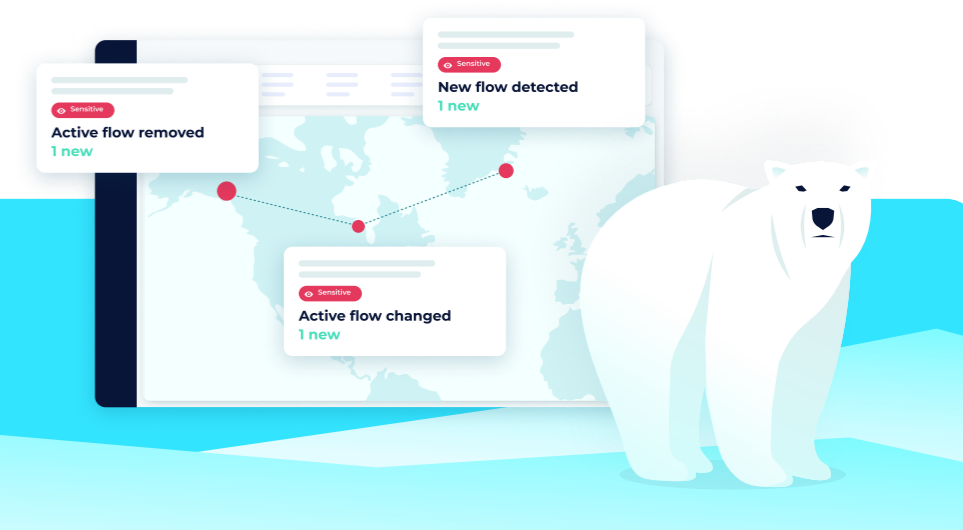

Use cases

For Security Teams

- Discover sensitive data in dev, staging and production
 - Automatically discover all sensitive data across cloud accounts, regions and VPC
 - Identify rogue data stores
- Map data attack paths
 - Understanding potential and actual data movements and access
 - Verify data access entitlements
 - Identify unauthorized data movements
- Detect and remediate data vulnerabilities

For Governance & Compliance Teams

- Track East-West data movements violating compliance
- Audit and Remediate compliance violations
- Auto-generate reports for misplaced sensitive data and compliance posture

Do you know where your sensitive data is stored and where it can flow?
